Bellows, Boots & Specialty Sewn Products

With a complete in-house sewing shop, ISA Sales & Service can manufacture your sewn product requirements with competitive pricing and on-time delivery. With the many different types of fabricating opportunities available to our customers, ISA has become known as the "Complete Specialty Sewn Products Supplier" in the Midwest. One of the other advantages of making the products in-house is that we are very open to experimenting with different ideas. Some of the longest lasting and cost saving products have come from our customers talking to us about trying something new.

Boots, Bellows & Way Covers

The majority of the products we fabricate in our sewing shop are protective coverings. These include rod protecting boots and bellows which are sewn from many different materials to suit our customers' requirements. Way covers are another type of cover made to protect the extremely sensitive and expensive portion of numerous pieces of equipment.

Custom Sewn Products

Since we opened our sewing shop, we have been known as a supplier that will try the very different and exotic designs that our customers have. With these experiments, we have gained the knowledge and know-how to try almost any request. These have been from simple heat reflective or protective blankets to very large and detailed composite pads. Whatever your requirement is, big or small, call and talk to a customer service representative in our Sewn Products Division and they will be glad to discuss the options with you.

Different Designs and Styles are Available

Whether your need is for a rod protecting bellows or boot or heat reflective shields, one call is all it will take to satisfy your requirement of sewn products. Most have the capabilities to incorporate the following accessories to your fabricated product: zippers, Velcro, grommets, vents, wire mesh, guide rings, etc.
